BUCHDRUCKEREI VON HERRCKE & LEBELING,

## Vorwort.

Seit dem Erscheinen von Amyot & Serville's Hemipteren hat sich dieser Zweig der Entomologie merklich gehoben. land waren es Dallas und Walker, die das reiche Material des British Museum in ihren umfassenden Werken bearbeiteten; in Frankreich Signoret, der durch Veröffentlichung einer Anzahl von Monographieen das Studium der Hemipterologie wesentlich förderte; in Deutschland vollendete Herrich-Schäffer das von Hahn begonnene Werk, ausserdem lieferten v. Baerensprung, Stein und vor allem Kirschbaum und Fieber ausgezeichnete Abhandlungen und Monographieen; Zetterstedt, Boheman, Wallengrén und besonders Stål vertreten in Schweden diese Ordnung; in Neapel Costa, in der Schweiz Mever-Dür und in Russland endlich Sahlberg. durch die Arbeiten so vieler und ausgezeichneter Kräfte Ausgezeichnetes geleistet worden, versteht sich; es fehlt aber offenbar an einer concentrirten Uebersicht über alle diese vereinzelten Leistungen. Eine solche zu geben beabsichtigt der vorliegende Catalog, der durch Aufzählung aller beschriebenen Hemiptera nach einem auf der Basis der neueren Forschungen ruhenden Systeme ein bequemes Handbuch für Hemipterophilen bei dem Tauschverkehr und bei der Classification zu weiden hofft. Nutzen und Bedürfniss eines solchen Buches sind durch die grosse Zahl der Auflagen, welche der von dem Stettiner Verein herausgegebene Käfer-Catalog in verhältnissmässig kurzer Zeit erlebt hat, hinreichend dargethan. Die Beifügung des Vaterlandes und meist vollständiger Synonymie der Arten werden nicht unwillkommen sein.

In der Systematik habe ich mich grossentheils den Vorarbeiten von Dallas, Amyot & Serville und Stål angeschlossen, bin jedoch bisweilen von ihnen und besonders da abgewichen, wo ich glaubte, dem natürlichen Systeme den Vorrang vor irgend einem künstlichen bewahren zu müssen. Wegen der Umgestaltung der Nudirostri nehme ich Bezug auf das von mir in der Entomol. Ztg. 1859, pag. 91, Gesagte. Ferner habe ich die Genera: Deltocephalus, Thamnotettix, Athysanus wieder mit Jassus vereinigt, da es nicht möglich ist, sie streng zu sondern. Grössere Abänderungen habe ich weiter nicht vorgenor

men; dass hier und da Genera umgestellt worden, auch wohl für einzelne Gruppen besondere Namen aufgestellt sind, bedärf weiter keines Commentar's.

Im Anhange habe ich ausser den Emendanda et Corrigenda und den Genera insertae sedis die Gruppe der Sciocoridae nach Fieber aufgeführt; dieselben erschienen gleichzeitig mit Dallas' Sciocoriden; ich konnte aber bei der Schwierigkeit dieser Familie nicht unternehmen, ein System dem andern unterzuordnen, liess daher den Dallas im Zusammenhange und habe den Fieber desshalb im Anhange gegeben.

Etwaige Irrthümer in der Synonymie, Auslassungen, an denen es um so weniger fehlen wird, als es mir nicht möglich war, mehrere Abhandlungen von Say, Hope, Guérin etc. einzusehen, bitte ich durch Einsendungen an die Stett. Entomol. Zeitung zu berichtigen, jede Verbesserung soll bei einer spätern Auflage dankbar benutzt werden.

STETTIN, im Juli 1859.

Anton Dohrn.

Folgende Arten sind mir bei Abfassung des Catalogs ebenfalls entgangen, da sie in einer Zeitschrift (Annales des sciences physiques et naturelles d'agriculture et d'industrie Tom. VII. pag. 92. 113. 1855) beschrieben sind, die sonst wenig entomologische Arbeiten liefert. Die Arten sind von *Montrouzier* beschrieben und stammen aus *Woodlark* in Oceanien.
